About the Instructor
Frank Strong is on the roster of the Iowa Arts Council, Metro Arts Alliance of Des Moines, Partners in Art and VSA Arts of Iowa. Frank began to play guitar and harmonica when he was 18 years old. In his day job, Frank is Associate Director at a non-profit training agency serving persons with disabilities in central Iowa. Frank regularly teaches harmonica through Des Moines Adult Education and at arts days for local schools. Frank enjoys playing a variety of music, performing at farmer's markets and jamming with local blues bands. Frank has recorded a CD of his favorite railroad songs accompanied by guitar and harmonica, which can be heard on his website rrsongs.com.

History
Adapted from *Blues and Rock Harmonica* by Glenn Weiser.

The story of the harmonica began with the Chinese Emperor Nyn-Kwya, who invented a free-reed instrument called the sheng (‘sublime voice’) in 3000 B.C. This early instrument is considered the forerunner of the modern harmonica.

The present-day harmonica was invented in 1821 by a German clockmaker named Christian Buschman who put fifteen pitch pipes together. In 1857 Matthias Hohner decided to manufacture harmonicas on a large scale in Trossingen, Germany. The harmonica spread all over Germany, and with the mass emigration of Germans in the latter half of the nineteenth century, all over the world. By the time of the American Civil War, the harmonica was well established in the United States. Many soldiers on both sides of the Civil War played them.

As harmonicas became more widely available, different playing styles have evolved. Players discovered that notes could be lowered in pitch by changing the pressure exerted on reeds. These "blue" notes of the African vocal scale were reproduced on the new instrument. By the 1920's, when recording companies began to look for blues acts, blues harp was a common sound in the southern part of the United States. After World War II, a large relocation of blacks from the rural south to the urban north took place. Many moved to Chicago, with the giants of blues harmonica recording and performing there.

Other musicians popularized the harmonica as a rock instrument. Young English guitarists imitated American black blues guitarists. The blues-based British rock invasion of the late 1960's re-popularized the blues, and helped to establish the harmonica as a rock as well as a blues instrument.

And now you will be a part of the history of the harmonica . . .
Beginning to Play

A diatonic harmonica has ten holes. Each hole can play two different notes, depending on whether you are exhaling (blowing) or inhaling (drawing). The 20 notes of the diatonic harmonica cover a range of three octaves. They are arranged in such a way that only the middle octave contains a complete eight-note scale.

How to play the diatonic harmonica in the key of C:
1. Hold the harmonica with one hand at each end, with the numbers facing you. Low notes are on the left and high notes are on the right.
2. Holes 4, 5, 6 and 7 will play the notes of the beginner songs.
3. Position your mouth over the fourth hole. Pretend you are sipping on a straw, or whistling.
4. Blowing into hole 4 will play a C. Draw on hole 4 and you have D.
5. Blowing into hole 5 plays an E. Drawing out plays F.
6. Blow on 6 for a G and draw to get A.
7. Draw on 7 for a B.
8. Blow into 7 for the top note of the C major scale.
9. Practice going slowly up and down the scale several times until you can hit each note.
10. Lift your tongue on and off holes 1, 2 and 3 and you will get a C chord.

Make sure your mouth is clean before playing. Tap the harmonica lightly to remove debris. Soaking your harmonica in water is NOT recommended.

The Number System
Begin by playing a C Major scale. Any plain number indicates to blow on that hole. A number with a - before it means to draw on that hole.

Frequently Asked Questions

Do I need to be able to read music to play harmonica?
No. There are several systems for notating harmonica music that do not use a clef. Most use up arrows for the blow (exhale) notes, and down arrows for the draw (inhale) notes.

What if I have problems playing a single note?
Don't worry too much about playing single notes. Have some fun with the songs first. Practice single notes by placing your index fingers tightly over holes 3 and 5 and cram the whole thing into your mouth. Tightly cover holes 3 and 5 and practice blowing into hole 4. Or, use your fingers to manually squeeze in the corners of your lips. Now try to maintain this position without your fingers. The average person takes a few weeks to get this technique. Repeat it slowly over and over again until you build the correct muscle memory.

How far in my mouth should the harmonica go?
The harmonica should always be between your lips and not against them. That is, we want the harmonica against the inside of our lips and not the outside of our lips. Try this on hole number 4, slowly blowing and drawing. As a general rule, always put the harmonica as far into your mouth as possible while still playing a clean single note.

How long should I practice?
For the first few weeks of playing you will find that after a short amount of time your lips get tired and they don't do exactly what you ask them to. This is perfectly normal and will go away with practice and time. It is normal for your mouth and hands to get tired after playing for extended periods. Practice for 10 minutes 2 or 3 times a day and build up your endurance.

What if the harmonica sticks to my lips?
If your lips begin sticking to the harmonica when you go from hole to hole, lick your lips and the portion of the harmonica where you would place them. Any lubricants other than your natural saliva are not recommended.

What about saliva?
Keep your head up while playing, which will help keep the excess saliva that you will naturally generate from ending up in the harmonica. Remove excess moisture from inside the harmonica from time to time by rapping the harmonica, mouthpiece down, against your palm or leg. The excess moisture can clog the reeds in the harmonica.
Beginner Songs

Remember, a plain number indicates to blow on that hole.
A number with a - before it means to draw on that hole.

```
g C D E F G A B C'
